ShP country-specific statutory reports	●	●
ShP client-specific custom reports	●	●
ShP dashboards	●	●
Rebiling	●	
Process automation with APIs	●	

ShP=shadow payroll. Grey markers indicate partial functionality.

**Certino Enterprise** is our core application offering shadow payroll calculation, rebiling and reporting. Payroll and expense data is loaded directly into the application. Certino Enterprise is perfect for organisations with large numbers of staff working across borders.

**Certino Start** is a simpler application delivering shadow payroll calculation and reporting, but without rebiling. The client enters data into pre-defined templates in the Certino Start application. Certino Start is ideal for companies that have low numbers of mobile employees but still want accurate, compliant shadow payroll calculation.

## How fast is Certino?
